

*“The Name to Know In Noise Control”*

## The complete solution for professional audio

Creating acoustically ideal rooms is challenging, particularly if existing spaces must be adapted. By absorbing, blocking and containing the areas of concern— flutter echo, near field reflection, room resonances, standing waves, exterior sounds—ArtUSA Industries professional solutions effectively and affordably solve acoustic control issues. The right sound is critical. That’s why ArtUSA Industries is dedicated to meeting the need of sound engineers and producers in every corner of the globe. We solve noise problems in

television, radio and film studios as well as religious recording and audio test facilities such as ABC, DISNEY, CNN, TBS and many others. ArtUSA Industries affordable, fire-resistant and easy-to-install acoustical wall panels, ceiling tiles and barrier materials are designed to help deliver the right sound. Art-Barrier products help you isolate studios and listening rooms from outside sounds. Art-Tile Ceilings are perfect for control rooms, offices and lobbies, and offer aesthetics as well as one of the industry’s highest noise reduction ratings. Art-Tile metal ceiling tiles create a sleek, modern or high-tech look at an affordable price in offices, lobbies and conference rooms— without sacrificing acoustic control. Art-Fab wall panels are gaining popularity for their combination of sleek design and outstanding acoustic control in all frequencies.

“Live end/dead end” acoustics are created in control room settings using foam to treat the wall behind the speakers and a portion of the two adjacent walls, leaving the listener area untreated or “live”.
