A sound environment for learning

In classrooms, gymnasiums, indoor pools and other learning environments, poor speech intelligibility—the ability to understand what is being spoken—can adversely affect learning, achievement and enjoyment. The culprit is background noise and reverberation or echo. ArtUSA Noise Control Products, Inc. helps solve these issues in new and existing schools with cost-effective, long-lasting and easy to install enclosures, ceiling tiles, wall panels, baffles and other acoustical solutions. It is something educators know intuitively and research supports—high levels of background noise and reverberation or echo hinder learning. So, what's the solution as class sizes continue to increase and budgets continue to shrink? ArtUSA Industries affordable acoustic and sound control solutions are the proven answers to help

education and training sound better and positively influence learning. Lightweight and easy to suspend from high, open ceilings using traditional hanging or innovative cable suspension systems baffles absorb sound from all directions to reduce reverberation in indoor pools, gymnasiums, multipurpose rooms and other large interior spaces. Baffles are offered in a variety of standard and custom colors to complement or match school colors. Fabric-wrapped wall panel absorbs up to 85% of the sound directed toward it. They are available in hundreds of fabrics to complement or match school colors in classrooms, music rooms, offices and gymnasiums. Ceiling tiles with a backer board drop into a standard grid system and help block sound traveling from adjacent rooms. Tiles without a backer board can

be adhered to any wall or ceiling surface making them ideal for rooms without a grid system or those with low ceiling heights.
