Introducing the STC 31 NRC 1.00 Silent Protector™ Absorbent Wall

ArtUSA is proud to announce the addition of the Silent Protector™ noise absorbing wall to our product line up. Building on our robust Tongue & groove, easy to install system. The Silent Protector™ noise absorbing wall offers an attractive, cost effective noise wall option for applications where a reflective wall is not ideal.

Commercial Residential Applications Applications

HVAC Units

Air Conditioners

Pumping Stations

Pool Pumps

Transformers

Standby Generators

Generators

Oil & Gas Drilling

Indoor/Outdoor Industrial

Machinery

Outdoor Music Venues

Designed in response to an industry need for an absorptive noise wall that was high performing, structurally strong, maintenance free and cost effective. The Silent Protector™ has an STC (Sound Transmission Class) rating of 31 with an NRC (Noise Reduction Coefficient) rating of 1.0, can be installed to heights of 30' and spans of up to 10' and is a comparably lower in cost than other similar products.

Perfect for the nuisance noises produced by pool pumps, generators and air conditioners around the home. The Silent Protector™ can be fabricated into U or L shaped enclosures to remove the maximum amount of noise.

Industrial loading docks, HVAC units, blowers, exhaust fans & any large equipment that businesses need to perform essential tasks within their organizations can also upset abutting neighbors. A sound absorbing noise wall like the Silent Protector™ can reduce the noise to acceptable levels. Construction noise? Need a temporary wall?
