

## TRANSPORTATION CASE STUDY

### THE DETAILS

Highway noise is of greater concern now more than ever. State DOT's place a priority on preventing excess noise disturbance for residences along high-traffic roadways. On this project, the Kentucky DOT decided a noise wall would be the best solution and came to ArtUSA for help. With homes on both sides of the highway, KYDOT preferred our absorptive ArtVinyl™ wall to prevent soundwaves from reflecting off the wall and back across the highway. In addition, the multiple color options for the ArtVinyl™ wall allowed the state to choose a color that was most aesthetically pleasing for their environment.

### ABOUT US

ArtUSA Noise Control Products is a turnkey acoustical solutions provider based out of Atlanta, GA. With over 20 years of experience in the industry, ArtUSA has completed numerous projects in the transportation industry. These projects include DOT noise walls, structure-mounted barriers for railway stations, as well as walls for logistics and distribution centers. ArtUSA frequently completes pre- and post-install noise studies, and offers field-installation nationwide. No matter the size or location of your application, give us a call to see how we can help.
